Introduction

The “Saudi Sites” project aims to provide a comprehensive overview of the prominent landmarks in Saudi Arabia through an integrated website. The site allows visitors to explore notable tourist, cultural, and historical sites, enhancing awareness of Saudi heritage and offering a rich interactive experience.

Objective

The website aims to serve as a reference platform displaying detailed information about Saudi Arabia’s landmarks, with a gallery section allowing users to view images and access additional details upon clicking on any site. Additionally, the website includes a Dashboard page for content management, making it a valuable educational and touristic tool for users.

Main Features:

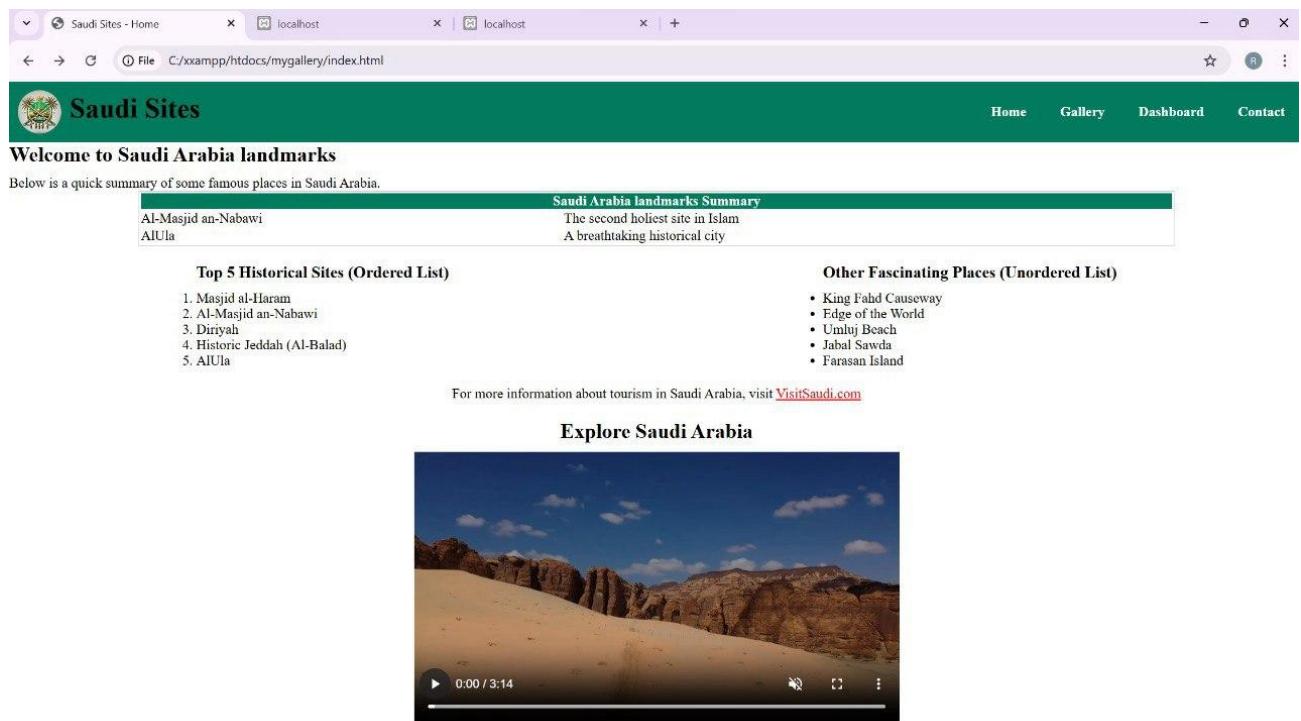

- Interactive Image Display featuring various landmarks across Saudi Arabia.
- Database System to store and manage landmark details.
- Dashboard Page for easy content management.
- Responsive and Well-Structured Design to enhance user experience across different device.
- Contact Form allowing visitors to send inquiries.

Technologies Used:

- **HTML & CSS:** for structuring and designing the website.
- **JavaScript:** to enhance interactivity, such as displaying information when clicking on images.
- **PHP & MySQL:** for database creation and storing landmark information for retrieval when needed.

Website Design:

(Home Page)

The screenshot shows a web browser window with three tabs open. The active tab is titled "Saudi Sites - Home" and displays the content of the website. The URL in the address bar is "C:/xampp/htdocs/mygallery/index.html".

The website has a dark green header with the title "Saudi Sites" and a logo on the left. On the right side of the header are navigation links: "Home", "Gallery", "Dashboard", and "Contact".

The main content area has a dark green background. At the top, there is a section titled "Welcome to Saudi Arabia landmarks" with the subtext "Below is a quick summary of some famous places in Saudi Arabia.". Below this, there is a summary for "Al-Masjid an-Nabawi" in AlUla, describing it as the second holiest site in Islam and a breathtaking historical city.

On the left, there is a list titled "Top 5 Historical Sites (Ordered List)" with the following items:

1. Masjid al-Haram
2. Al-Masjid an-Nabawi
3. Diriyah
4. Historic Jeddah (Al-Balad)
5. AlUla

On the right, there is a list titled "Other Fascinating Places (Unordered List)" with the following items:

- King Fahd Causeway
- Edge of the World
- Umrah Beach
- Jabal Sawda
- Farasan Island

At the bottom of the main content area, there is a link: "For more information about tourism in Saudi Arabia, visit [VisitSaudi.com](#)".

Below the main content, there is a section titled "Explore Saudi Arabia" featuring a video player showing a desert landscape with sand dunes and rocky mountains under a blue sky with white clouds. The video player shows a progress bar at 0:00 / 3:14.

(Managing Contact Data)

The screenshot shows the phpMyAdmin interface for managing a MySQL database. The top navigation bar includes tabs for Browse, Structure, SQL, Search, Insert, Export, Import, Privileges, Operations, Tracking, and Triggers. The current view is on the 'Browse' tab for the 'contact_us' table.

The main area displays the results of the query: `SELECT * FROM `contact_us``. It shows 3 total rows. The table structure includes columns: id, name, email, and message. One visible row has the id 2, name 'Reuof', email 'rash44111@hotmail.com', and message 'A distinctive, simple and harmonious sit'.

Below the table, there are buttons for Edit, Copy, Delete, and Export. There are also links for Profiling, Edit inline, Explain SQL, Create PHP code, and Refresh.

At the bottom, there are additional buttons for Print, Copy to clipboard, Export, Display chart, and Create view. A 'Query results operations' section allows bookmarking the query with a label and a checkbox for letting every user access the bookmark.
